Richard Bernstein Advisors

RBA employs a macrodriven, top-down style to construct global tactical equity and asset allocation portfolios. The investment team uses quantitative indicators and the firm's macro-economic analysis to invest in global equity, fixed income asset classes, sub-asset classes and sectors using only US-listed ETFs. The firm currently has \$15.7 billion collectively under management and advisement as of 3/31/2025.

Investment Committee: Richard Bernstein; Michael Contopoulos; Malvika Dhingra; Matthew Griswold, CFA; Lisa Kirschner; Matthew Poterba, CFA; Henry Timmons, CFA. For investment minimums, please contact your financial advisor. Performance information included in this factsheet is as of current quarter-end and subject to change. Prior period returns may have been restated to conform to this presentation. All other information is as of the most recent quarter end. See disclosure at the end of the factsheet for further information.

Past performance is no guarantee of future results.

The Global Moderate ETF Strategy outperformed its benchmark in 1Q25, posting a return of 1.38% compared to a 0.68% return for its style index*.

Equity Positioning

The Strategy was overweight equity over the period, holding an average weight of 52.5% (2.5ppt overweight) in 1Q25. The equity sleeve outperformed the -1.32% return of its benchmark, the MSCI ACWI Index**. Within equities, the overweight in U.S. value and high dividend-paying stocks, allocation to international high-quality stocks, and underweight in U.S. megacap growth stocks helped performance. This was partially offset by the overweight in small cap stocks and underweight in international developed markets and China.

Fixed-Income Positioning

The Strategy was underweight fixed income over the period, holding an average weight of 42.4% (2.6ppt underweight). The fixed income sleeve performed similarly to the 2.78% return of its benchmark, the Bloomberg US Aggregate Bond Index. The portfolio's underweight in investment grade corporate bonds, and allocation in a yield curve steepener helped performance. This was offset by the portfolio's shorter duration and overweight in collateralized loan obligations (CLOs). The strategy was underweight cash, holding an average weight of 1.9%.

Commodities Positioning

The 3.2% average weight in gold was a significant contributor to performance.

Changes in Portfolio

During the quarter, RBA made several changes to the portfolio. We increased the overall quality of the portfolio and selectively added to our defensive exposure in anticipation of earnings nearing their peak. At the same time, we increased our exposure to low beta cyclical by adding Financials. While we remain overweight US small caps and non-China emerging markets due to their improving profit cycles, we have begun to pare back these overweights as an initial shift toward higher quality. Within international developed markets, we further increased exposure to higher quality assets to navigate the changing environment.

Outlook & Positioning

We entered 2025 believing the year would read like a 2 Act play; with Act 1 marked by stronger-than-expected profit growth and Act 2 bringing higher volatility as earnings peak in Q2 or Q3. Despite the recent tariff induced volatility, underlying economic conditions in the first quarter remained healthy and we continue to expect strong Q1 earnings. Further, while investor focus has been anchored on a narrow set of equities over the past year, we saw a broadening of performance in the first quarter and expect that to continue for the foreseeable future.

However, equity markets have entered a period of adjustment, as higher equity risk premiums reflect growing market uncertainty. In recent weeks, investors have begun to reprice risk more broadly, driven by increasing trade uncertainty causing shifting expectations around inflation, interest rates, and corporate profitability. This evolving environment is reintroducing risk differentiation across sectors, styles, and regions. We expect the tariff headwinds to pull forward our expectations for the peak in the profit cycle and accelerate the move towards Act 2, though, and have searched for certainty amongst a sea of uncertainty.

With this transition in mind, we began to increase the quality of our portfolios in February and anticipate further increases in quality and defensives as the profit cycle nears its peak and we

enter Act 2. Our portfolios are overweight healthcare and utilities, two defensive sectors, as well as value, which is higher quality by many measures than growth. Our portfolios maintain overweight positions in U.S. small-cap equities and non-China emerging markets due to their improving profit cycles, but we have pared these overweights as an initial shift toward Act 2. Core inflation remains sticky, suggesting that monetary policy may remain more constrained than the market currently anticipates. In this environment, inflation-sensitive assets like gold play an important role in diversified portfolios. As the US market adjusts to peaking profit growth, restrictive fiscal policy, and tight monetary policy our focus remains on areas where fundamentals are improving, and risks are better compensated.

IMPORTANT DISCLOSURE

The performance was calculated by Richard Bernstein Advisors LLC (the “Adviser”) for the Global Moderate ETF Strategy (“Strategy”) as described below. The Strategy’s asset allocation recommendations are subject to guideline allocation limitations at the major asset class level (i.e., equity, fixed income and cash) that may change over time.

The Strategy has an inception date of September 30, 2011. The Strategy seeks risk-adjusted long-term growth for a moderate risk tolerance by employing a top-down style to construct a global tactical asset allocation portfolio. Accounts in this Strategy obtain desired exposure via ETF vehicles.

The Strategy returns represents the all-asset composite return from October 1, 2011 until March 31, 2018 and thereafter represents the composite returns of the Global Moderate ETF strategy maintained by RBA. The Global Moderate ETF strategy is presented after March 31, 2018.

The benchmark is composed as follows: 50% MSCI ACWI USD Net, 45% Bloomberg US Aggregate Index Unhedged USD, and 5% Bloomberg US Treasury Bills: 1-3 Months Index Unhedged. The benchmark is rebalanced daily. The firm’s complete list of composite returns is available upon request.

Past performance is no guarantee of future results. Performance is shown in USD and includes reinvestment of dividends and other earnings. Results are shown on a “gross” and “net” basis. Gross-of-fee returns are reduced by actual trading costs incurred and platform fees but are before deduction of any advisory or other fees. Net performance is shown net of a model annual advisory fee of 0.40% deducted on a monthly basis, the highest fee charged by the Adviser. Taxes have not been deducted. Prior to 2016, net returns are calculated using the actual investment management fee of the all asset strategy composite. The composite includes all fully discretionary accounts that invest across equities, bonds, cash, currencies, and commodities for exposure to global asset classes with a tolerance for moderate risk.

Index and portfolio data herein have been supplied by outside sources, including, Richard Bernstein Advisors LLC, and are believed to be reliable as of the date indicated. The source for ETF returns is Richard Bernstein Advisors LLC. The source for risk measures is Morningstar.

About Risk: Any investment is subject to risk. ETFs are subject to risks similar to those of stocks, such as market risk, and investors who have their funds invested in accordance with the model portfolio may experience losses. Additionally, fixed income (bond) ETFs are subject to interest rate risk, which is the risk that debt securities in a portfolio will decline in value because of increases in market interest rates. Foreign investments may be subject to greater risk than domestic investments. Investments in foreign instruments or currencies can involve greater risk and volatility than U.S. investments because of adverse market, economic, political, regulatory, geopolitical or other conditions. In emerging countries, these risks may be more significant. The value of commodities investments will generally be affected by overall market movements and factors specific to a particular industry or commodity, including weather, embargoes, tariffs, or health, political, international and regulatory developments. An imbalance in supply and demand in the income market may result in valuation uncertainties and greater volatility, less liquidity, widening credit spreads and a lack of price transparency in the market. As interest rates rise, the value of certain income investments is likely to decline. Investments in income securities may be affected by changes in the creditworthiness of the issuer and are subject to the risk of non-payment of principal and interest. The value of income securities also may decline because of real or perceived concerns about the issuer’s ability to make principal and interest payments. Smaller companies are generally subject to greater price fluctuations, limited liquidity, higher transaction costs and higher investment risk than larger, established companies. Derivatives instruments can be used to take both long and short positions, be highly volatile, result in economic leverage (which can magnify losses), and involve risks in addition to the risks of the underlying instrument on which the derivative is based, such as counterparty, correlation and liquidity risk. If a counterparty is unable to honor its commitments, the value may decline and/or the portfolio could experience delays in the return of collateral or other assets held by the counterparty. Investing in an exchange-traded fund (ETF) exposes the Strategy to all of the risks of that ETF and, in general, subjects the Strategy to a pro rata portion of the Strategy’s fees and expenses.
